

# Seamless eSignature workflows with Dropbox and HelloSign

Transform your team's workflow with eSignatures and create effortless collaboration for everyone in your organisation.

In the past, organisations were hamstrung by slow and often tedious workflows. Valuable time was wasted printing, filing and searching for legally binding paperwork. The wait for critically important documents to be signed often took weeks and held up work from moving forward.

But now, Dropbox and HelloSign are doing away with all that, creating the ultimate enterprise cloud solution for document and e-signature workflows.

## HelloSign can transform your business

- **Improve document turnaround times by up to 80%**
- **Improve completion rates by as much as 26%**
- **Shorten sales cycles by as much as 10 days**
- **Ensure transparency with a full signer audit trail**
- **Implement up to 2x faster than other eSignature leaders**

## Keep work flowing - and secure - all in one place

Dropbox and HelloSign can help you get key documents signed fast, all with the added benefit of an audit trail—the proof of where and when the document was signed.

Using Dropbox and HelloSign together as a one-stop shop helps you swiftly turn a contract from a first draft to a final, legally signed PDF. Meanwhile, your signed copies are automatically saved back to your folders within Dropbox.

You can collaborate in Dropbox with your team members to finalise the document before sending it for signature via HelloSign.

## Here's how it's done →

When you're ready to add an electronic signature to an important document in Dropbox, just select the PDF or Word doc you want signed, and you'll see an Open menu where you can instantly select HelloSign.

Your document will then open within HelloSign, so you can send it for signature in just a few quick clicks. Your electronically signed documents are automatically stored back in the same original Dropbox project folder as a signed copy.

Dropbox and HelloSign work together to make the signing process seamless, secure, and organised.

All the documents relevant to that project are now organised in Dropbox and stored safely in the cloud. You can then use Dropbox permissions to control who has access to the signed documents.

**Get started** by connecting your Dropbox and HelloSign accounts today.
